To avoid the danger of fire

1. The microwave oven should not be left unattended during operation. Power levels that are too high or cooking times that are too long may overheat foods resulting in a fire.
2. This oven is not designed to be built-in to a wall or cabinet.
3. The electrical outlet must be readily accessible so that the unit can be unplugged easily in an emergency.
4. The AC power supply must be 220V, 50Hz.

7. Do not install the oven in an area of high humidity or where moisture may collect.
8. Do not store or use the oven outdoors.
9. If food being heated in the oven begins to smoke, **DO NOT OPEN THE DOOR**. Turn off and unplug the oven and wait until the food has stopped smoking. Opening the door while food is smoking may cause a fire.
10. Use only microwave-safe containers and utensils.
11. Do not leave the oven unattended when using disposable plastic, paper or other combustible food containers.
12. Clean the waveguide cover, the oven cavity, the turntable and roller stay after use. These must be dry and free from grease. Built-up grease may overheat and begin to smoke or catch fire.
13. Do not place flammable materials near the oven or ventilation openings.
14. Do not block the ventilation openings.
15. Remove all metallic seals, wire twists, etc., from food and food packages. Arcing on metallic surfaces may cause a fire.

7. Should the power supply cord become damaged, it must be replaced with a special cord supplied by a **SERVICE CENTRE APPROVED BY SHARP**. And it must be replaced by a qualified service technician trained by SHARP.

To avoid the possibility of explosion and sudden boiling

1. Never use sealed containers. Remove seals and lids before use. Sealed containers can explode due to a build up of pressure even after the oven has been turned off.
2. When boiling water or other liquids, use a wide-mouthed container to allow bubbles to escape. It is advisable to insert a glass rod or other similar utensil to prevent sudden boiling (resulting in splashing or burning).
3. Do not cook eggs in their shells. They may explode. The explosion may damage the oven or injure yourself. To cook or reheat eggs which have not been scrambled or mixed, pierce the yolks and whites, or the eggs may explode. Shell and slice hard boiled eggs before reheating them in the microwave oven.
4. Pierce the skin on such foods as potatoes, sausages and fruit before cooking, or they may explode.

Whenever the top heater, bottom heater or convection symbols are displayed the turntable, turntable support, racks, oven door, outer cabinet, oven cavity and especially bottom heater will become very hot. To prevent yourself from getting burnt use thick oven mittens.
2. Always open containers, popcorn makers, oven cooking bags, etc., away from the face and hands to avoid steam burns.
3. Always stand back from the oven door when opening it to avoid burns from escaping steam and heat.
4. Slice stuffed baked foods after heating to release steam and avoid burns.
5. Stir the food and the contents of cooking containers, and test their actual temperature before giving them to infants, young children or elderly people to avoid internal burns.
6. Do not catch the utensil, your clothes or accessories on the door safety latches when you take out the food from the oven.

Interior walls:

Wipe spatters and spills with a little dish washing liquid on a soft damp cloth. For heavier stains inside the oven cavity only, use a mild stainless steel cleaner applied with a soft damp cloth. Do not apply to the inside of the door. Wipe clean ensuring all cleaner is removed.

After use wipe the waveguide cover in the oven with a soft damp cloth to remove any food splashes. Built-up splashes may overheat and begin to smoke or catch fire. Do not remove the waveguide cover. HELPFUL HINTS

MICROWAVE COOKING

1. ARRANGEMENT

Arrange foods carefully. Place thickest areas toward outside of dish.
Eg. Arrange vegetables in a shallow dish in the following way:

Hard Vegetables around the outside, Soft Vegetables in the centre, Medium Vegetables in-between.

2. TURNING

Foods such as poultry and joints of meat should be turned over after half the cooking time.

3. COVERING

Cover foods in the microwave if you would normally cover the food in your ordinary oven, or to retain moisture. Cover foods such as Vegetables, Casseroles, or when Reheating.

Use to cover foods:

4. PIERCING

Pierce potatoes, eggs, oysters, tomatoes or any foods with a skin or membrane to allow steam to escape.

5. SHIELDING

Shield using small pieces of aluminium foil to shield thin areas of meat, fish and poultry or edges of cakes to prevent overcooking.

6. STANDING TIME

Standing time is important. After cooking or defrosting ensure adequate standing time. This allows the food to continue cooking or heating. Refer to cooking guides for each menu or according to manufacturers instructions.

7. STIRRING

Stir foods from the outside to the centre of the dish, once or twice during cooking if possible.

Eg. Casseroles and Sauces.

8. SIZE

Small pieces cook faster than large ones. To speed cooking, cut pieces smaller than 5 cm so microwaves can penetrate to the centre from all sides. For even cooking, make all the pieces the same size.

9. DENSITY

The depth to which microwaves penetrate food varies depending on the food's density. Porous foods like minced beef or mashed potatoes microwave faster than dense ones like steak or whole potatoes.

10. FAT AND BONE

Marbling within meat, or a thin, even layer of fat on a roast, speeds cooking. Large fatty areas or excess drippings in dish attract energy away from meat, and slows cooking. Centre bones do not affect cooking, but bone on the side of meat conducts heat to the areas next to it.

11. STARTING TEMPERATURE

Frozen or refrigerated food takes longer to heat than food at room temperature. Cooking times in this book are based on normal storage temperatures. Since rooms, refrigerators and freezers differ in temperature, check for doneness at the minimum time.

12. QUANTITY

Microwave cooking times are directly related to the amount of food in the oven. Because energy is absorbed by the food itself, one potato or a single piece of chicken cooks rapidly. When the energy is divided among several items, cooking takes more time.

13. CONDENSATION

Condensation is a normal part of microwave cooking. The humidity and moisture in food will influence the amount of condensation in the oven. Generally, covered foods will not cause as much condensation as uncovered foods. Ensure that the ventilation openings are not blocked.

HELPFUL HINTS

GRILL COOKING	CONVECTION COOKING
1. Use thick oven gloves when removing the food or turntable from the oven to PREVENT BURNS. Because the oven cavity, door, turntable, turntable support, racks, dishes and especially bottom heater will become very hot. 2. Foods may be cooked either directly on turntable, or using the high or low racks.  LOW RACK HIGH RACK	1. Use thick oven gloves when removing the food or turntable from the oven to PREVENT BURNS. Because the oven cavity, door, turntable, turntable support, racks, dishes and especially bottom heater will become very hot. 2. For best results, preheat to required temperature with the turntable in the oven. Add food after preheating. 3. Metal cookware can be used. Round pizza trays are excellent cooking utensils for cooking.  CAKE TIN SQUARE DISH PIZZA TRAY
MIX COOKING	
1. There are four automatic, preprogrammed mix settings. a) High mix top grill - Top browner with 70% microwave power. b) Low mix top grill - Top browner with 50% microwave power. c) High mix bottom grill - Bottom browner with 50% microwave power. d) Low mix bottom grill - Bottom browner with 10% microwave power. 2. Use thick oven gloves when removing the food or turntable from the oven to PREVENT BURNS. Because the oven cavity, door, turntable, turntable support, racks, dishes and especially bottom heater will become very hot. 3. Metal cookware can be used. During mix cooking some metal utensils may cause arcing when they come in contact with oven walls or accessory racks. To prevent arcing when using a metal tin, place a heat resistant dish (Pyrex pie plate, dinner plate) between the tin and the rack.  CAKE TIN PIZZA TRAY	4. If you are cooking and wish to check the temperature you have programmed, simply press the CONVEC pad. The programmed temperature will be displayed as long as CONVEC pad is pressed. 5. Do not cook 2 layers of eg. biscuits at the same time.
